DETAILED ACTION

Allowable Subject Matter

1. Claims 3, 7, and 9-12 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 2, 4-6 and 8 rejected under 35 U.S.C. 103(a) as being unpatentable over Sun (5,899,742) in view of Hokazono (6,573,583)

Regarding Claims 1, 2, 4-6 and 8, Sun discloses a manufacturing method for self-aligned local interconnects and contact simultaneously where in Figs. 3F and 3H, layer 31 is isolation region, formed in semiconductor substrate 30, gates 34a and 34b are formed over the substrate, and source/drain regions 36 are formed at both sides of the gates, layer 44 is protective insulating layer formed on the isolation region 31, , layers 42a, 42b, and 42c are silicide layers and 37a, 37e, 37c and 37d are the sidewall spacers. Sun fails to disclose the alignment structure of the silicide layer with respect to insulation layer and spacer. However, Hokazono discloses a semiconductor device and its manufacturing method where in where in Fig. 4, silicon layer 10 is located between the sidewalls 9 and blocking insulation layer 18. Furthermore, in claims section (claim 2) it is also disclosed that the silicon layer 10 can be a silicide layer. Therefore, silicide

layer 10 is aligned between the sidewall spacer and the blocking insulation layer and it is located over the source/drain region.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required alignment structure of the silicide layer in Sun as taught by Hokazono in order to have a semiconductor structure with higher reliability.
